Professional Summary

Analytical and detail-oriented Software Engineer with experience in SQL Production Support in the Banking domain. Skilled in database troubleshooting, REST API integration, and ITSM tools such as ManageEngine ServiceDesk Plus. Proficient in Java, SQL, and web technologies with strong problem-solving and analytical abilities.

EDUCATION

October 2020 - May 2024

Anna University College of Engineering Panruti

Bachelor of Engineering in Computer Science and Engineering (CGPA of 7.9)

Banking Support Executive Trainee, EDL Technologies

2025 - Present

Production Support - Banking Domain (KVB Datacenter)

- Delivered production support for the Account Opening System (AOS), resolving branch-level issues related to customer onboarding and account creation.
 - Executed advanced SQL-based troubleshooting to analyze account failures, application drops, and data inconsistencies.
 - Resolved critical data mapping issues between application and account numbers, ensuring accurate account processing and approval.
 - Performed root cause analysis (RCA) and implemented permanent fixes to minimize recurring production incidents.
 - Administered and configured ManageEngine ServiceDesk Plus (ME SDP) for efficient Incident, Problem, and Change Management.
 - Developed and optimized workflows, SLAs, and automation rules to improve ticket resolution time and service efficiency.
 - Enforced role-based access control by managing user roles, permissions, and technician groups within the ITSM tool.
 - Analyzed tickets, generated reports, and built dashboards while collaborating with cross-functional teams to resolve critical issues within SLA timelines.
-

PROJECTS

Bank Management System – Project (HTML, CSS, Java Script, MySQL)

- Developed and implemented a Bank Management System using MySQL and PHP to manage customer, account, and transaction data with high data accuracy.
 - Designed a normalized relational database schema using primary and foreign keys to ensure data integrity and efficient data retrieval.
 - Performed end-to-end CRUD operations (INSERT, SELECT, UPDATE, DELETE) and optimized SQL queries using JOINS for multi-table data processing.
 - Integrated RESTful API concepts (GET, POST, PUT, DELETE) and validated API functionality using Postman for accurate request-response handling.
 - Applied input validation, exception handling, and client-server architecture principles with JSON-based data exchange to ensure secure and error-free application performance.
-

TECHNICAL SKILLS

Programming Languages: Java, Python, HTML, CSS, PHP, Java Script

Database: SQL (Oracle, MySQL)

Tools: Visual Studio Code, Eclipse IDE, Postman, XAMPP

Technologies: REST API, CRUD Operations, JSON

Methodologies: Agile, SDLC
